/note="Vector: pCMV-Sport6; Site 1: Not1; Site 2: Sal1;
This is a long-transcript enriched cDNA library (Genome Res. 11: 153-1558 (2001). [PMD: 11544199] From WA01
call line. Undifferentiated human BS call line WA01/H1
was obtained from WiCell Research Institute, Inc.,
Madison, Wi. cultured according to their instructions, on MEF feeders. They formed round colonies with defined edges and were positive for alkaline phosphatase, SSEA-4, OCT3, OCT4, REX1, UTF, TERT, SOX2, CX43 and CX45. They are negative for GATA2, GATA4, PDX1, NCAM, WSX1, FLT3, SSEA-1, TUBB3, NES, GFAP, and BOMES. When confluent (18-10 days after plating), the ES calls from 4 X 6cm dishes were treated with 1 mg/ml collagenase, type IV
(Invitrogen/GIBCO) for 5-10 min and gently scraped off with 5 ml pipette. RNA was purified with TRIZOl Reagent from Invitrogen. Protocol ref; Genome Rea 11: 1553-1558 (2001). [PMID:11544199]) bouble-stranded cDNAs were synthesized with an Oligo(dT) primer [Invitrogen: 3.49 of total RNA, treated with T4 DNA polymerase, and purified by ethanol precipitation. The cDNAs were ligated to Long-linker LL-Sal4, purified by phenol/chloroform extraction, and separated from free linkers by centricon-100 column. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal4-S for 25 cycles. The products were purified by phenol/chloroform extraction and Centricon-100 column. The cDNAs were amplified by pCMV-SPORTG blasmid vector. The average liste is about 3.6kb."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AGGGACAGTGTCCTTCCTCCCTGCACAACACGGTGGGATCTCCAAGGGATAGGAAGCC 1037

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 14306, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

TITLE OF INVENTION:

TITLE OF INVENTION:

CURRENT APPLICATION NUCLEIC acids and proteins of the Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: PatentIN Ver. 2.0

SEQ ID NO 14306

LENGTH: 2064

Patent No. 6610534
GENERAL INFORMATION:
APPLICANT: No. 6610534artis AG
APPLICANT: No. 6610534artis AG
TITLE OF INVENTION: Induction of blood vessel formation through administration of
TITLE OF INVENTION: polynucleotides encoding sphingosine kinases
FILE REFERENCE: 4-31617
CURRENT APPLICATION NUMBER: US/09/970,516
CURRENT FILING DATE: 2001-10-04
NUMBER OF SEQ ID NOS: 6
SOFTWARE: PatentIn version 3.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CGCTTCACACTGGGCACGGTGCTGGGGCCTCGCACACTGCACACCTACCGCGGACGCCTC 1020

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT: Homburst et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

FILE REFERENCE: File Reference: 7326-094

CURRENT PAPLICANTION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 30448

LENGTH: 901

TYPE: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               102 AsnHisProArgAlaValLeuValProSerSerLeuArgileGlyIleIleProAlaGly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 LysHisLeuLeuValPhelleAsnProPheGlyGlyGlyGlnGlyLysArglleTyr

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
